

Foundations Info-Metrics: List of Boxes

Chapter 1 – Introduction

Box 1.1. A Concise Historical Perspective

Chapter 2 – Rational Inference: A Constrained Optimization Framework

Box 2.1 – On the Equivalence of Probabilities and Frequencies

Box 2.2. A Simple Geometrical View of Decision Making for Underdetermined Problems

Chapter 3 – The Metrics of Info-metrics

Box 3.1: Information and Guessing

Box 3.2: Information, Logarithm Base and Efficient Coding – Base Three is the Winner

Box 3.3: Information and Entropy: A Numerical example

Chapter 4 – Entropy Maximization

Box 4.1. Graphical Representation of Inequality Constraints

Box 4.2. Temperature and its Conjugate Variables

Box 4.3. Primal – Dual Graphical Relationship

Box 4.4. Bayes' Theorem

Box 4.5 Maximum Entropy Inference: A Basic Recipe

Box Appendix 4B. Hypothesis Tests: A Qualitative Representation

Chapter 5 – Inference in The Real World

Box 5.1. Info-Metrics and Tomography

Box 5.2. Networks for Food Webs

Chapter 6 – Advanced Inference in The Real World

Box 6.1. The Bose-Einstein Distribution

Box 6.2. Prediction Table

Box 6.3. Brain Tumor: Definitions and Medical Background

Box 6.4. Prediction Accuracy, Significance Level, and miRNA

Chapter 7: Efficiency, Sufficiency and Optimality

Box 7.1. Maximum Entropy and Statistics: Interrelationships among their Objectives and Parameters

Box 7.2. Variance and Maximum Entropy

Box 7.3. Relative Entropy and Cramér-Rao Bound

Box 7.4. Information, Maximum Entropy, and Compression: Numerical Examples

Box Appendix 7A. Concentration Theorem: Numerical Examples and Implications

Chapter 8 – Prior Information

Box 8.1. Multivariate Discrete Distributions: Extending the Two-Dice Problem

Box 8.2. Size Distribution Revisited: Constructing the Priors

Box 8.3. Simple Variable Transformation

Box 8.4. Priors for a Straight Line

Chapter 9 – A Complete Info-Metrics Framework

Box 9.1. Incorporating Theoretical Information in the Info-Metrics Framework: Inferring Strategies

Chapter 10 – Modeling and Theories

Box 10.1. A Toy Model of a Single Lane Traffic

Chapter 11 – Causal Inference via Constraint Satisfaction

Box 11.1 A Six-Sided Die Version of Default Logic

Box 11.2. Markov Transition Probabilities and Causality: A Simulated Example

Chapter 12 – Info-Metrics and Statistical Inference: Discrete Problems

Box 12.1. Die, Conditional Die, and Discrete Choice Models

Chapter 13 – Info-Metrics and Statistical Inference: Continuous Problems

Box 13.1. Rényi's and Shannon's Entropies

Box 13.2. Three-Sided Die and Information-Theoretic Methods of Inference

Box 13.3. Constraints from Statistical Requirements

Box 13.4. Inequality and Nonlinear Constraints from Theory

Chapter 14 - New Applications Across Disciplines
